

PREPARING SCIENTISTS WHO INFORM PRACTICE AND POLICY

Pharmaceutical Outcomes Research is a PhD program in the Skaggs School of Pharmacy and Pharmaceutical Sciences (SSPPS). This program is housed in the Center for Pharmaceutical Outcomes Research (CePOR), a school-wide center in SSPPS. Our doctoral curriculum is designed to develop competent and highly skilled researchers in the study of patient, provider, or population-level health care and health system interventions within the context of prescription drug use and policy. Areas of focus emphasized in the degree program include pharmacoeconomics, pharmacoepidemiology, health services research, and drug policy.

OUR STUDENTS

Graduates of the Pharmaceutical Outcomes Research PhD program are equipped to pursue careers in academia, government, industry, healthcare systems, and Contract Research Organizations. Our alumni hold positions at institutions such as the University of Maryland, USC, Regis University, CU Medicine, and Bristol Myers Squibb.

WHY CHOOSE CU ANSCHUTZ?

SSPPS is a recognized national leader in pharmaceutical research. Being housed on the CU Anschutz Medical campus, an academic medical center, enables students to form collaborations with their peers and faculty within the schools of pharmacy, medicine, nursing, and public health. CU Anschutz is also home to nationally-ranked University of Colorado Hospital, Children's Hospital of Colorado, and the Veterans Affairs Medical Center.

PROGRAM HIGHLIGHTS

RESEARCH AREAS

- Pharmacoeconomics
- Pharmacoepidemiology
- Health Services Research
- Drug Policy

FINANCIAL SUPPORT

Support may be available and would include tuition & fees, health & dental insurance, and a \$31,000 stipend. Most students serve as a Teaching Assistant for at least one year.

APPLICATIONS

We accept applications from September 1 to December 1 for the following fall. On-campus interviews take place in February.
