Postdoctoral research opportunity in the department of Computer Science Engineering at CU Denver

Individual with research experience and interest in implementing and evaluating deep reinforcement learning (DRL) systems to assist in developing explanation system to describe the decisions from such models.

Qualifications:

- A PhD in Computer Science or related field.
- Experience in Artificial Intelligence/Machine Learning and have a strong programming background in Python.
- Experience working on research projects in an academic setting or demonstration of high research potential.
- Oversee and manage the research and development of explanation systems for deep reinforcement learning systems.
- Excellent proficiency in both written and oral English.
- Excellent communication skills including the ability to communicate well in a team setting.
- Great motivation for research, interest in the relevant topics, and good knowledge of relevant theory and methods.
- Ability to work independently as well as in teams.

Must be US citizen and be able to commit time to support regular program meetings and milestone.

Salary: $4,707 per month.

Investigator: Professor Gita Alaghband
